

INNOVating the uptake of **Energy Auditing Schemes** for SMEs

Project partners

10

Countries involved

6

Project duration

36 month

innoveas is aiming to raise awareness and build capacity in the field of energy auditing and related energy saving measures in Small and Medium Enterprises (SME).

The development of all economic potentials for energy saving is a fundamental condition for achieving the European energy and climate policy goals for 2030 and 2050.

Energy efficiency in enterprises is an important aspect in achieving climate change objectives while strengthening the competitiveness.

European Small and Medium Enterprises are exempt of the obligation to carry out energy audits, but in case they do it, the impact is very important.

innoveas facilitates the investment in energy efficiency for SMEs by:

Analyzing the behavioral barriers to energy audits.

Providing a training program to identify the best energy efficiency measures to be adopted in SMEs.

Creating an institutional structure to maintain the objectives and results of the project.

innoveas is addressing **industrial associations, policy makers, institutional actors** and **financial institutions**. The final beneficiaries of this programme are the **European SMEs**.

The training offers are adapted to the stakeholders and range from **webinars** to tailored **in-company trainings** and to **special trainings for energy auditors**.

The innoveas aim is to reach the majority of companies and to create a **community of stakeholders** with an active participation in order to better disseminate the actions.

Be part of our community !
